GRANT OF USAGE RIGHTS FINAL THESIS

I hereby declare that I:

- ☑ **Grant***
- ☐ **Do not grant**

IU Internationale Hochschule GmbH ("IU") a non-exclusive, free of charge, unlimited in time, content, and territory right of use to my submitted final thesis ("thesis").

***Note**: If "grant" is selected, the points on page 2 must be observed and confirmed accordingly. If "do not grant" is selected, no further information is required.

If I grant the right of use, this includes in particular the right:

1. **to store, reproduce, digitize, archive, catalogue, index, and include** the thesis in databases,
2. to publish the thesis on the IU Docs repository for an **unlimited** period and make it accessible **exclusively internally**, i.e. only to IU members and affiliated companies after login,
3. to use the thesis, **in whole or in part, for internal purposes such as research, teaching, quality assurance, innovation, and product and process development** within IU and its affiliated companies, including text and data mining,
4. to process the thesis, **in whole or in part, in machine-readable** form and to carry out technically necessary modifications for this purpose (e.g. format conversions, metadata enrichment, segmentation, annotation),

IU is **not** obliged to publish the thesis.

I also declare that I have not transferred **any other usage rights that would conflict with this grant of rights**. I am aware that my right to use the thesis, in whole or in part, for scientific and/or commercial purposes and to publish it, for example with a publisher or independently, remains **unaffected** by this grant of rights and therefore continues to belong to me.

If you wish to grant IU the above-mentioned usage rights, please read the following information carefully and check the required and—if desired—the optional boxes.

Mandatory information (required):

☑ I confirm that the thesis is **not** subject to a confidentiality restriction.
Note: IU ensures that before any further use in accordance with this consent, all personal data as well as company information and internal details in the entire work are anonymized so that no conclusions about individuals or companies can be drawn.

☑ I am aware that I can request the **deletion of the thesis from IU Docs** at any time through IU's Library and Information Services. I am also aware that uses already carried out within internal research/development and AI workflows may not always be technically or organizationally reversible (e.g. if content has already been incorporated into aggregated analyses or trained models); in such cases, **IU will not use the thesis again** for these purposes in the future and will discontinue further **internal access** via IU Docs.

Optional (voluntary):

☑ I additionally grant IU the right to use the thesis, **in whole or in part**, for the **development, training, improvement, validation, and quality assurance of AI systems** (including machine learning and generative AI methods) for scientific research purposes; this also includes the creation and use of technical representations (e.g. vectorizations/embeddings) and the evaluation of the thesis within IU's internal AI workflows.

Further information on the processing of personal data in the context of publication and internal use of the thesis can be found in the relevant data protection notices.
